Robot Mapping

A Short Introduction to Homogeneous Coordinates

Gian Diego Tipaldi, Luciano Spinello, Wolfram Burgard

Motivation

- Cameras generate a projected image of the world
- Euclidian geometry is suboptimal to describe the central projection
- In Euclidian geometry, the math can get difficult
- Projective geometry is an alternative algebraic representation of geometric objects and transformations
- Math becomes simpler

Projective Geometry

- Projective geometry does not change the geometric relations
- Computations can also be done in Euclidian geometry (but more difficult)

Homogeneous Coordinates

- H.C. are a system of coordinates used in projective geometry
- Formulas involving H.C. are often simpler than in the Cartesian world
- Points at infinity can be represented using finite coordinates
- A single matrix can represent affine transformations and projective transformations

Homogeneous Coordinates

- H.C. are a system of coordinates used in projective geometry
- Formulas involving H.C. are often simpler than in the Cartesian world
- Points at infinity can be represented using finite coordinates

 A single matrix can represent affine transformations and projective transformations

Homogeneous Coordinates

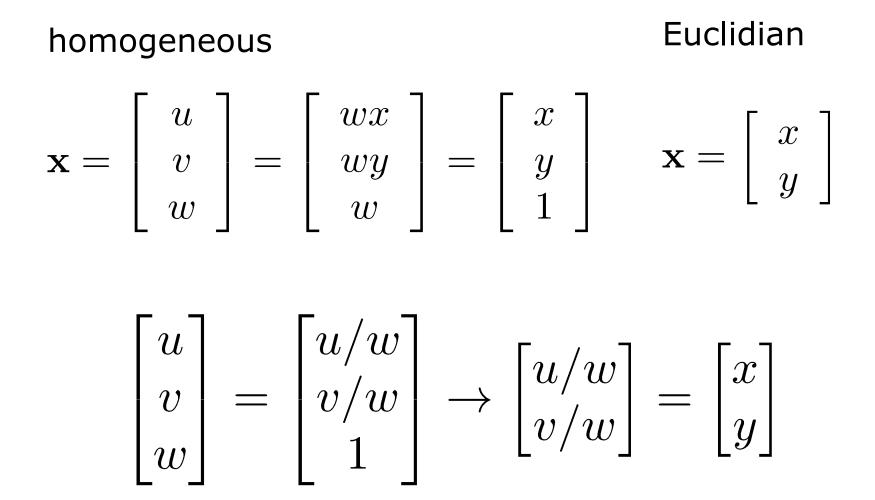

Definition

• The representation \mathbf{x} of a geometric object is homogeneous if \mathbf{x} and $\lambda \mathbf{x}$ represent the same object for $\lambda \neq 0$

Example

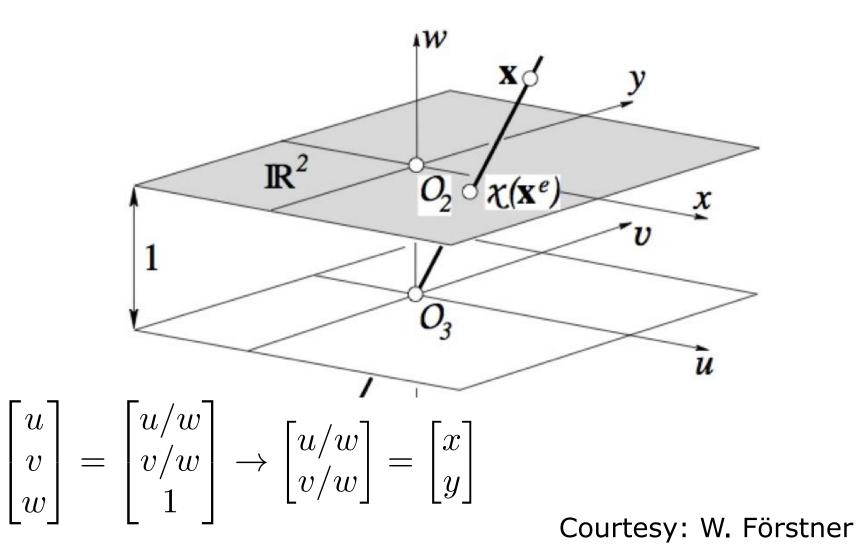

$$\mathbf{x} = \begin{bmatrix} u \\ v \\ w \end{bmatrix} = \begin{bmatrix} wx \\ wy \\ w \end{bmatrix} = \begin{bmatrix} x \\ y \\ 1 \end{bmatrix}$$

From Homogeneous to Euclidian Coordinates

7

From Homogeneous to Euclidian Coordinates

8

Center of the Coordinate System

Infinitively Distant Objects

 It is possible to explicitly model infinitively distant points with finite coordinates

$$\mathbf{x}_{\infty} = \begin{bmatrix} u \\ v \\ 0 \end{bmatrix}$$

 Great tool when working with bearingonly sensors such as cameras

3D Points

Analogous for 3D points

Transformations

 A projective transformation is a invertible linear mapping

$\mathbf{x}' = M\mathbf{x}$

Important Transformations (\mathbb{P}^3)

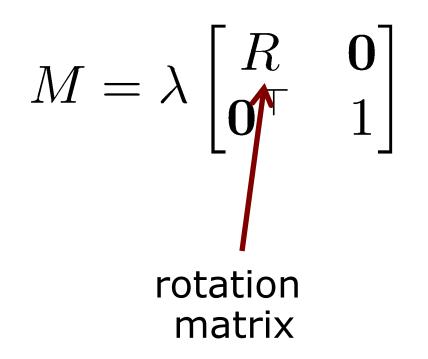

General projective mapping

$$\mathbf{x'} = M_{4 \times 4} \mathbf{x}$$

• Translation: 3 parameters (3 translations) $I = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$ $M = \lambda \begin{bmatrix} I & \mathbf{t} \\ \mathbf{0} & \mathbf{t} \end{bmatrix} \quad \mathbf{t} = \begin{bmatrix} t_x \\ t_y \\ t_z \end{bmatrix} \quad \mathbf{0} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$

Important Transformations (\mathbb{P}^3)

 Rotation: 3 parameters (3 rotation)

Recap – Rotation Matrices

$$R^{2D}(\theta) = \begin{bmatrix} \cos(\theta) & -\sin(\theta) \\ \sin(\theta) & \cos(\theta) \end{bmatrix}$$

$$R_x^{3D}(\omega) = \begin{bmatrix} 1 & 0 & 0 \\ 0 & \cos(\omega) & -\sin(\omega) \\ 0 & \sin(\omega) & \cos(\omega) \end{bmatrix} \quad R_y^{3D}(\phi) = \begin{bmatrix} \cos(\phi) & 0 & \sin(\phi) \\ 0 & 1 & 0 \\ -\sin(\phi) & 0 & \cos(\phi) \end{bmatrix}$$
$$R_z^{3D}(\kappa) = \begin{bmatrix} \cos(\kappa) & -\sin(\kappa) & 0 \\ \sin(\kappa) & \cos(\kappa) & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

$$R^{3D}(\omega,\phi,\kappa) = R_z^{3D}(\kappa)R_y^{3D}(\phi)R_x^{3D}(\omega)$$

Important Transformations (\mathbb{P}^3)

Rotation: 3 parameters
 (3 rotation)

$$M = \lambda \begin{bmatrix} R & \mathbf{0} \\ \mathbf{0}^\top & 1 \end{bmatrix}$$

 Rigid body transformation: 6 params (3 translation + 3 rotation)

$$M = \lambda \begin{bmatrix} R & \mathbf{t} \\ \mathbf{0}^\top & 1 \end{bmatrix}$$

Important Transformations (\mathbb{P}^3)

Similarity transformation: 7 params
 (3 trans + 3 rot + 1 scale)

$$M = \lambda \begin{bmatrix} mR & \mathbf{t} \\ \mathbf{0}^{\top} & 1 \end{bmatrix}$$

Affine transformation: 12 parameters
 (3 trans + 3 rot + 3 scale + 3 sheer)

$$M = \lambda \begin{bmatrix} A & \mathbf{t} \\ \mathbf{0}^\top & \mathbf{1} \end{bmatrix}$$

Transformations in \mathbb{P}^2

| 2D Transformation | Figure | d. o. f. | Н | Н |
|---------------------|--------|----------|---|---|
| Translation | ħ. İ. | 2 | $\left[\begin{array}{rrr} 1 & 0 & t_x \\ 0 & 1 & t_y \\ 0 & 0 & 1 \end{array} \right]$ | $\begin{bmatrix} 1 & \mathbf{t} \\ 0^{T} & 1 \end{bmatrix}$ |
| Mirroring at y-axis | ħ. đ., | 1 | $\left[\begin{array}{rrrr} 1 & 0 & 0 \\ 0 & -1 & 0 \\ 0 & 0 & 1 \end{array}\right]$ | $\left[\begin{array}{cc} \boldsymbol{Z} & \boldsymbol{0} \\ \boldsymbol{0}^{T} & \boldsymbol{1} \end{array}\right]$ |
| Rotation | Þ. Ø. | 1 | $\left[egin{array}{c} \cos arphi & -\sin arphi & 0 \ \sin arphi & \cos arphi & 0 \ 0 & 0 & 1 \end{array} ight]$ | $\left[\begin{array}{cc} R & 0 \\ 0^{T} & 1 \end{array}\right]$ |

Transformations

Inverting a transformation

$$\mathbf{x}' = M\mathbf{x}$$
$$\mathbf{x} = M^{-1}\mathbf{x}'$$

Chaining transformations via matrix products (not commutative)

$$\mathbf{x}' = M_1 M_2 \mathbf{x}$$
$$\neq M_2 M_1 \mathbf{x}$$

Motions

 We will express motions (rotations and translations) using H.C.

$$M = \lambda \begin{bmatrix} R & \mathbf{t} \\ \mathbf{0}^\top & \mathbf{1} \end{bmatrix}$$

Chaining transformations via matrix products (not commutative)

$$\mathbf{x}' = M_1 M_2 \mathbf{x}$$

Conclusion

- Homogeneous coordinates are an alternative representation for geometric objects
- Equivalence up to scale

 $\mathbf{x} \equiv \lambda \mathbf{x}$ with $\lambda \neq 0$

- Modeled through an extra dimension
- Homogeneous coordinates can simplify mathematical expressions
- We often use it to represent the motion of objects

Slide Information

- These slides have been created by Cyrill Stachniss as part of the robot mapping course taught in 2012/13 and 2013/14. I created this set of slides partially extending existing material of Edwin Olson, Pratik Agarwal, and myself.
- I tried to acknowledge all people that contributed image or video material. In case I missed something, please let me know. If you adapt this course material, please make sure you keep the acknowledgements.
- Feel free to use and change the slides. If you use them, I would appreciate an acknowledgement as well. To satisfy my own curiosity, I appreciate a short email notice in case you use the material in your course.
- My video recordings are available through YouTube: http://www.youtube.com/playlist?list=PLgnQpQtFTOGQrZ4O5QzbIHgl3b1JHimN_&feature=g-list
